

West km Feature Summary

Version	Date	Enhancement
4.8.1	April 2012	enhanced the West km Integration Web Services, primarily adding new stateless REST services for litigation analyzer, transactional document analyzer, and services transferred from SOAP
		added new services for HTML conversion and cite recognition
		updated indexing component engines for cite recognition, litigation analyzer, transactional document analyzer, and the search component
4.8	November 2011	added support for West km integration with the WestlawNext iPad app v2.5.0
		added support for West km–iManage integration for 64-bit environments installed with West km software
		added an additional setting for ordering results from a natural language search
		added support for mapping custom fields to Boolean, date, and integer fields, as well as string fields, in your DMS
		added support for iManage 9.0
4.7	May 2011	added support for 64-bit environments (note that with a West km 64-bit environment, integration with Interwoven WorkSite is not supported)
		improved the performance of drop-down lists and look-up controls on the Fields panels
		added a new version of Stellent
		added support for NetDocuments and eDOCS DM version 5.3.x
		changed the integration method for eDOCS DM so it relies on a direct connection to the SQL Server database, not the eDOCS DM API
		added the ability to edit the Include Documents with Subfolders option for a collection of documents in an NTFS folder
		adding the ability to use the Document Size field (available in Interwoven WorkSite) in vetting rules
		added the usage transaction kmViewResultListFederatedWL, which relates to full-text searches in the WestlawNext™ interface
		added a system option that sets whether secondary judges are shown or hidden on the Fields panel in West km for Litigation
		improved the relevancy of KeySearch® results

WESTLAW**

Thomson Reuters Westlaw comprises industry leading online research, print products, software, tools, and services that help legal professionals perform their work faster and more efficiently, every day.

Version	Date	Enhancement
4.6.1	June 2010	added integration with WestlawNext
		merged the West km Add-In Tool (both the Litigation and Transactions modules) with West BriefTools version 2.3
		enhanced terms highlighting in Locate, so that original terms are highlighted in yellow and Locate terms are highlighted in purple
4.6	February 2010	improved the Sort feature
		added an administration usage feature to track, print, and export changes that have been made to the system
		added support for Microsoft SQL Server 2008 (32-bit and 64-bit)
4.5	August 2009	added support for Windows 7 (32-bit and 64-bit)
		improved the search performance in West km for Litigation, particularly for KeyCite [®] requests and KeySearch, by adding search metadata tables
		enhanced the document analyzer so that Microsoft [®] Word is not required on indexing servers
		added a new vetting schedule window to better control when vetting is scheduled
		added judge links to Westlaw [®] Profiler in West km for Litigation
		redirected the HTML Storage link on the Indexing Server Setup page so it points directly to the HTML Storage, Details and Indexing page
		added the ability to manually synchronize document collections
		improved the way fuzzy search results are expanded in West km for Transactions
		added links to Westlaw Profiler for references to validated judges in documents and document summaries in West km for Litigation
		added support for Interwoven 8.4 and 8.5
4.2	March 2009	added support for Internet Explorer 8.0
		improved the document analyzer engine used in West km for Litigation
		added judge information to the metadata that is identified and extracted in litigation documents during analysis
		improved court identification so that the jurisdiction is now included in the court name
		added the ability to control whether the Westlaw Business link on the toolbar in West km for Transactions is displayed
4.1.2	November 2008	added support for additional ProLaw 11 versions (up to version 11.11)
		added a new indexing job that runs the storage portion of the litigation analysis process without having to reanalyze documents

Version	Date	Enhancement
4.1.1	September 2008	added the ability to define the type of search control that displays for several fields on the Fields panel in the West km interface
		enhanced the features associated with the Lit Jurisdiction, Lit Court, and Lit Doc Type fields to make finding relevant documents easier
		updated the km database schema so that only valid values are displayed in drop-down lists and look-up controls for litigation analyzer and custom fields (Microsoft SQL Server 2005 is now required)
		updated the search pages in the West km interface to make them easier to use
		updated the result list interface on Westlaw to more closely match the West km interface
4.1	July 2008	added library group restrictions for KeyCite
		added the ability to clear all fields on the Fields panel
		added Limits and Locate functionality in West km for Transactions
		added Apply and Cancel buttons on the top of the Limits page
		added the ability to expand searches in West km for Transactions to Westlaw Business
		replaced DMS file titles in result lists with analyzed titles
		expanded the product key options to include more components
		added an installation option to run database scripts manually
		improved the user interface and navigation on several pages on the Setup tab
		enhanced the features for removing data source connections and document collections so that corresponding documents are automatically removed as well
		reorganized several System Options pages and settings
		enhanced the field display settings to (1) allow for both the selection and ordering of fields, (2) provide separate settings for West km for Litigation and West km for Transactions, and (3) control the fields displayed in the document header
		added field validation on the DMS Settings pages
		added several user interface display settings to further control the search and result list interfaces
		enhanced several tables in the vetting toolkit so they can be sorted
improved the scheduling of vetting and synchronization so that processes are controlled by windows on the Indexing Server Setup page		
added a global date restriction for vetting rule groups		
added a new default rule group for court papers in the vetting toolkit and allowed for rules to be saved without a selected DMS library		
added a shared configuration file to avoid duplication of settings in multiple configuration files		

Version	Date	Enhancement
		created a new API that allows for enhancement of documents or processes outside of the West km environment
4.0	January 2008	introduced a new user interface
		introduced a new litigation document analysis feature that automatically extracts the document title, document type, jurisdiction, and court from documents
		added the ability to change a client ID during a research session
		added the ability to define up to three custom fields in West km by mapping to DMS data
		enhanced the process of scheduling automatic indexing updates for document collections
3.3	October 2007	enhanced lookup fields in the vetting toolkit
		added an option for loading documents from Lotus Notes
		enhanced WORLDOX support
3.1	July 2007	improved the automated installation process
		added annotation rights in West km for Litigation
		added the ability to change the Litigation or Transactions tab names
		added a new version of the default rule groups in the vetting toolkit
		added an indicator for total document counts in a rule group
		added a new version of Stellent
		added support for Microsoft Word 2007 and Corel® WordPerfect® X3 in the add-in tool
		added support for Internet Explorer 7.0
3.0.2	July 2007	improved user authentication when accessing West km via Westlaw
		added the ability to delete documents from West km for Transactions
		added the ability to search documents without analysis metadata
		improved the display of document summaries in West km for Transactions when multiple instances of the same metadata are only listed once in the summary
		added the ability to change or remove the primary indexing server
		added support for Hummingbird DM 6.0
3.0.1	May 2007	added global exclusionary rules to the vetting toolkit
		added the ability to copy rules to multiple rule sets in the vetting toolkit
		enhanced the Get Doc Count feature in the vetting toolkit
		improved support for the AND operator in vetting rules
		added the ability to sort values for field lookup in the vetting toolkit
		added the ability to display and print the complete list of vetting rules in the vetting toolkit

Version	Date	Enhancement
		added multiple selection check boxes in the vetting toolkit so documents can be selected in one click
		added a new setting to control the number of page results for the vetting toolkit
		improved navigation in the vetting toolkit
		enhanced bulk and incremental vetting
		added usage reports and print functionality
		added new search fields for usage reporting
		added more flexible options for exporting usage reporting data
		added the ability to archive usage reporting data
		added support for Microsoft SQL Server 2005
		added field searching to intranet searches
3.0	September 2006	added a new search component, identical to that used by Westlaw
		added support for Interwoven 8.2
		added the ability to expand library group listing by default
		added a new ActiveX [®] control required for load copy functionality
		added the ability to apply indexing service windows to specific database connections
2.7	June 2006	added the ability to add custom field labels
		added the display of DMS fields to result lists in West km for Transactions
		added the ability to customize text in search templates in West km for Transactions
		integrated West km with resource tabs in Westlaw
		enhanced usage reporting
		added equivalent search terms for similar jurisdictions
		added functionality for duplicated documents to inherit indexing options from all document collections that contain them
		enhanced full-text searching in West km for Transactions
2.6.7	January 2006	added the ability to define vetting windows in the vetting toolkit
		added the Vetting Job Statistics page
		added navigational links to search by document, clause, or defined terms on the basic search screen in West km for Transactions
		added the ability to hide transactional or litigation library groups depending on the user
		added the ability to customize the user interface display in West km for Transactions

Version	Date	Enhancement
2.6.6	December 2005	expanded search capability for clauses and defined terms in West km for Transactions
		added the ability to define the target interface for the km citing references icon
		added the ability to rename library groups
		improved navigation on the Setup tab
		added the ability to change the default connector in West km for Litigation
		added the ability to remove common words from searches
		enhanced the vetting toolkit
2.6.5	November 2005	added incremental vetting to the vetting toolkit
		changed the default search in West km for Transactions to documents by title
2.6.4	October 2005	enhanced the vetting toolkit
		added capability for selecting a default jurisdiction
		enhanced WORLDOX support
2.6.3	September 2005	enhanced the vetting toolkit
		upgraded the version of Stellent for improved HTML indexing
		enhanced profile metadata updates
		changed the default connector from AND to OR in West km for Transactions
		added smart data indexing to concept searching in West km for Transactions
		added a tracking option for the add-in tool in Microsoft Word
2.6.2	July 2005	enhanced usage tracking and reporting capabilities
		added the ability to search on annotations
		added the ability to edit or delete annotations
		added exemplar annotation capability
		added the ability to disable analysis of clauses and defined terms
		added the km citing references icon to identify internal documents
		added mouseover text for KeyCite flags
		added hyperlinked document titles in result lists
2.6.1	June 2005	enhanced the vetting toolkit
		added re-sorting capability in West km for Transactions
		updated display of annotations in West km for Transactions
		added options for individual product customization
		added the ability to set threshold results

Version	Date	Enhancement
		changed the results options for limited defined terms or clauses in West km for Transactions
		added DOCS Open [®] 4.0 support
2.5.8	May 2005	enhanced the vetting toolkit
		added support for Sybase with DOCS Open
		enhanced the Statistics page
		enhanced the Vetting Collections page
		enhanced DMS queries to improve performance
		added verification of DMS field mapping
2.5.7	May 2005	integrated the West km Vetting Toolkit with the core West km product
		added PDF indexing and support
		enhanced the display of document profiles
		enhanced the display of converted documents
2.5	August 2004	added the Limits and Locate features
		added field searching
		added the ability to restrict searches by library group
		added the ability to print multiple documents from results
		integrated West km with MyWestlaw
		added ResultsPlus functionality
		updated the West km intranet pages
		streamlined the administration of the Professionals table
		expanded usage reporting capabilities
		improved the architecture for system performance
		improved the overall indexing functionality
